If you need to transfer large files from a USB flash drive to the local hard drive, you can use Recuva, a free Windows tool. Just connect the drive to your PC, launch Recuva and click on the "Recover files" button to start scanning its content. You can preview deleted files, filter the results by file size or file type, perform undelete operations, verify the recovered files and delete backup copies. Recuva is the simplest and fastest tool we found to retrieve

large files from a flash drive. Managing large amounts of data is sometimes as big an issue as storing it, especially in the case of cloud-based services such as DropBox, Google Drive and Microsoft SkyDrive. These services make data storage easy for you, but they also make it hard to keep track of your data and make sure that the files or folders you put online
